

Landing Page Hero-Statments:

Make Workday Work.

Whether you're struggling with adoption, support, governance or optimisation, we help organisations unlock more value from Workday...without enterprise consultancy overheads.

Below I have attached the wireframe of how I expect this to look and land - you'll see some hover content that drops down from the healthcheck.

Zeneesha Website Messaging Framework (My V3)

Hero Section

Headline

Make Workday Work.

Subheadline

You invested in Workday to make life easier.

If you're still wrestling with adoption, support tickets, reporting headaches or governance challenges, something has gone wrong.

Zeneesha helps organisations optimise, support and evolve Workday so it delivers the value it promised in the first place.

Problem Section

Workday Isn't The Problem.

The way it's being used probably is.

Most organisations don't wake up one morning and decide to optimise Workday.

They usually reach that point after months (or years) of:

- growing frustration
- endless tickets
- confusing processes
- reporting issues
- "we'll look at that next quarter"

Sound familiar?

Low Adoption

Employees have access to Workday.

That doesn't mean they're actually using it properly.

Consequences

- HR becomes the unofficial helpdesk
- Employees create workarounds
- Self-service never quite takes off
- Every process takes longer than it should

Potential Impact

£100,000s in lost productivity every year.

HR Operational Inefficiency

Your HR team didn't sign up to spend their week fixing processes.

Yet here we are.

Consequences

- Higher HR workload
- Slower service delivery
- Reduced strategic focus
- Increased operating costs

Potential Impact

Up to £300,000 annually.

Reporting Delays

If every report requires detective work, something isn't working.

Consequences

- Slow decision making
- Manual reporting effort
- Reduced visibility
- Leadership flying partially blind

Potential Impact

£100,000+ annually.

Governance Challenges

Workday environments don't become messy overnight.

They drift.

Consequences

- Duplicate processes
 - Security risks
 - Configuration inconsistency
 - Delayed projects
-

Ticket Backlogs

Constant firefighting is not a support strategy.

Consequences

- Delayed improvements
 - Burnout risk
 - Reactive teams
 - Lost optimisation opportunities
-

Poor Manager Self-Service

Managers have enough on their plate already.

Consequences

- Slower approvals
- Increased HR dependency
- Reduced productivity
- Frustrated teams

Calculator Section

Curious What Workday Inefficiency Is Costing You?

The screenshot shows a Miro board titled "Workday Inefficiency Cost Calculator". The interface includes a yellow box with a slider for "No. of Staff" and a green box with various cost calculation formulas. Annotations provide context for the employee ranges and the calculator's purpose.

Workday Inefficiency Cost Calculator

No. of Staff: [Slider]

Est. Cost to your business:

This is an estimate based on configurable assumptions and should be validated through a Workday Health Check

Based on your organisation size, Workday inefficiency could be costing your business approximately £X per year in lost productivity, reporting delays, support overhead and operational friction.

500 to 3000 = every 250 employees
3000 to 10000 = every 500 employees

employees = slider value

managers = employees * 0.167
hr_staff = employees * 0.0167
hris_staff = employees * 0.00167

low_adoption = employees * 5 * 52 / 60 * 30

hr_inefficiency = hr_staff * 60000 * 0.10

reporting_delay = hris_staff * 10 * 52 * 40

governance_failure = 200000 * (employees / 3000)^0.85

ticket_backlog = hris_staff * 70000 * 0.30

manager_self_service = managers * 15 * 12 / 60 * 50

total_annual_cost = low_adoption + hr_inefficiency + reporting_delay + governance_failure + ticket_backlog + manager_self_service

Want to understand how we calculate this? Get in touch to learn more.

Most organisations can tell you exactly what Workday costs.

Far fewer can tell you what inefficient Workday usage costs.

Use our Workday Inefficiency Calculator to estimate the hidden operational costs affecting your organisation.

Why Zeneesha

Workday Expertise. Without The Consultancy Theatre.

Some consultancies love complexity.

We prefer clarity.

No unnecessary complexity.

No oversized programmes.

No surprises.

1. Dedicated Senior Ownership

No rotating account managers or ticket voids. You get direct access to a named, senior Workday consultant who thoroughly understands your configuration baseline.

2. Pre-emptive Risk Mapping:

We audit your environment and isolate hidden configuration gaps before major delivery begins. You will never have to explain a system surprise to your board.

3. Deliberate Self-Sufficiency:

We engineer ourselves out of a job. Every engagement includes thorough documentation and hands-on knowledge transfer to make your internal team completely independent.

4. Real, Board-Level ROI:

We have helped global enterprises—like AQA, LEGO—turn vague optimization stories into real, quantifiable business metrics.

5. Our Approach

Find The Iceberg Before You Hit It.

Most Workday projects look straightforward until someone uncovers six years of undocumented configuration.

That's why we front-load discovery, validation and scope mapping before major delivery begins.

Because we'd rather find the problems early than invoice you for finding them later.

The Result

- Reduced delivery risk
- Better planning
- Fewer surprises
- More predictable outcomes

Workday Health Check

Find The Value You're Already Paying For.

Most organisations invest heavily in Workday.

Our Health Check helps identify where adoption, governance, reporting and support challenges are preventing you from getting the return you expected.

The free Workday Health Check helps identify:

- Adoption challenges
- Governance risks
- Reporting inefficiencies
- Support bottlenecks
- Optimisation opportunities

You'll leave with practical recommendations and a clearer understanding of where value may be leaking from your Workday environment, **before committing to anything.**

FAQs:

Do you provide Workday AMS services?

Yes. But we'd rather help you need less support, not more.

We provide Workday AMS services for organisations that need additional expertise, capacity or specialist support. Our goal isn't to keep you dependent on us forever—it's to help your Workday environment become more efficient, more stable and easier to manage over time.

We're already paying a fortune for Workday. Why would we need a partner as well?

Because buying a gym membership doesn't automatically make you fit.

Workday is a powerful platform, but most organisations don't have a team of Workday specialists sitting around waiting for problems to appear.

We help bridge the gap between what Workday can do and what your organisation actually needs it to do.

The good news? Working with a specialist partner is often significantly more cost-effective than relying solely on premium vendor resources or hiring a large in-house team.

How do I know if my Workday environment needs optimising?

If you're asking the question, there's a decent chance it does.

Some common signs include:

- Growing support backlogs
- Low user adoption
- Reporting frustrations
- Manual workarounds
- Governance concerns
- Endless "we'll fix that later" lists

Our Workday Health Check helps identify where value may be leaking from your environment and where improvements can be made.

What's included in the Workday Health Check?

Think of it as an MOT for your Workday environment.

We'll review areas such as:

- Adoption

- Governance
- Reporting
- Support processes
- Optimisation opportunities

You'll receive practical recommendations and a clearer understanding of where inefficiencies may be costing time, money and patience.

No jargon. No scary consultant slide deck. Just useful insights.

We only need help with one small issue. Is that something you do?

Absolutely. We don't insist on turning every conversation into a six-month programme.

Whether it's a small integration, a reporting challenge, a security review or a wider optimisation project, we're happy to help.

Sometimes fixing one problem creates more value than launching a massive transformation programme.

What size organisations do you work with?

If you're running Workday, we're interested in talking.

We've supported organisations ranging from focused projects worth a few thousand pounds through to global programmes and long-term Workday support engagements.

The common theme isn't size.

It's organisations that want to get more value from Workday.

Do you only work in the UK?

No. Workday doesn't stop at borders and neither do we.

We support organisations globally across multiple industries, delivering projects, optimisation services and AMS support wherever Workday is being used.

How quickly can you start?

Usually much quicker than your internal approval process.

Timeframes vary depending on scope and availability, but we're often able to engage quickly for health checks, advisory work and smaller projects.

For larger programmes, we'll work with you to establish realistic timelines and delivery plans.

What makes Zeneesha different from other Workday consultancies?

We'd rather find the iceberg before you hit it.

Many Workday projects become frustrating because hidden complexity isn't identified until halfway through delivery.

We place a strong emphasis on discovery, validation and transparency so that expectations, scope and risks are understood early.

We also believe consultancy doesn't have to feel like consultancy.

You won't find unnecessary jargon, endless PowerPoints or vague recommendations here.

Just practical expertise focused on helping you get more value from Workday.

Can you help if our Workday implementation is already live?

Honestly, that's where many of our conversations start.

Most organisations don't need help implementing Workday forever.

They need help after implementation.

Once the project team disappears and real users start using the system, new challenges often emerge around adoption, reporting, governance and support.

That's exactly where we help.

Will you tell us if Workday isn't actually the problem?

Yes. Even if it costs us work.

Sometimes the issue isn't Workday.

Sometimes it's:

- Process design
- Governance
- Data quality
- Change management
- Internal ownership

If the problem sits outside Workday, we'll tell you.

Because solving the right problem is more important than selling the wrong service.

Final CTA

Stop Fighting Workday.

Start Getting Value From It.

Workday shouldn't feel harder than the problems it was supposed to solve.

Whether you need optimisation, support, integration expertise or a trusted partner, we're here to help.
