

Zeneesha.com — Website Audit & Action Plan

Prepared by iKawn | March 30, 2026 | Confidential

1. SEO Audit

We audited all 28 indexed pages and 168 blog posts. The site uses Yoast SEO on WordPress, which provides the right plumbing — sitemaps, canonical tags, schema markup — but the on-page execution has significant gaps.

Performance Metrics (Mar 2–29, 2026)

Metric	Current	Context
Active Users (28 days)	220	~8/day. Very low for B2B consulting.
New vs Returning	201 / 19	91% new. Almost no one comes back.
Avg. Engagement Time	5m 45s	Strong. People who stay are engaging deeply.
Homepage Bounce Rate	~54%	Above 50% = majority leave after one page.
High-Intent Users	29 (13%)	87% of traffic shows no buying signals.
Google Organic Users	35 (16%)	Organic should be 40–60% for B2B. Major gap.
Direct Traffic	167 (76%)	Brand-aware visitors only. No discovery engine.
LinkedIn Referrals	10	Best social channel but still tiny volume.
Key Events (Conversions)	78	Low volume. Tracking may also be incomplete.
Google CrUX Data	No Data	Not enough traffic for Google to benchmark speed.

SEO Issues Found Across Site

- **Homepage meta description typo:** Says "Zenesha" instead of "Zeneesha." Visible in every Google search result.
- **Duplicate H1 tags on every page:** A "Workday®" H1 in the footer CTA section creates 2 H1s per page site-wide. Confuses search engines.
- **60+ images missing alt text:** Across all pages. Hurts accessibility scores and image search ranking.
- **Missing meta descriptions:** /speak-to-our-workday-experts/ and /latest-news/ have no meta — Google auto-generates poor snippets.
- **Wrong page title on Cyber Security page:** Shows "Boost Your HCM and Finance operations with Zeneesha Workday AMS" — copy-pasted from Elevate.
- **Script/stylesheet bloat:** 22 scripts and 36 stylesheets on homepage alone. Damages Core Web Vitals, which Google uses as a ranking factor.
- **404 errors:** GA shows 5 users hitting dead pages in 28 days. Broken inbound links need 301 redirects.
- **No internal linking strategy:** 168 blog posts exist but don't link to service pages or to each other — search engines can't discover or weight them.

2. Page-by-Page Audit

28 pages in sitemap. Below are the 13 business-critical pages. Status: ✖ Broken ⚠ Issues ✓ OK (minor fixes)

Page	URL Path	Status	Key Issues
Homepage	/	⚠	Meta typo. 2× H1. 7/9 imgs no alt. Hero half-empty. 22 scripts, 36 styles.
Services Hub	/services/	⚠	H1 is just "Workday®." All 4 imgs no alt. No service overview content.
Elevate (AMS)	/services/zeneesha-elevate/	⚠	18 images, all missing alt. Duplicate H1. Content is functional.
HCM & Finance	/services/workday-hcm-and-finance-.../	⚠	All 4 imgs no alt. Duplicate H1. Meta desc truncated.
Data Migration	/services/data-conversion/	✓	Functional. Alt text + H1 fix needed.
Cyber Security	/services/cyber-security-services-.../	⚠	WRONG page title (Elevate's). All imgs no alt.
About Us	/about-us/	✓	Title says "Why Zeneesha." 4/12 imgs no alt. Content solid.
Contact Us	/contact-us/	✓	No scheduling tool. Basic 4-field form. No lead qualification.
Speak to Experts	/speak-to-our-workday-experts/	⚠	Meta description MISSING. Duplicate H1. 4/8 imgs no alt.
Resources	/resources/	⚠	Meta desc copy-pasted from About page. All imgs no alt.
Latest News	/latest-news/	⚠	Meta description MISSING. 15/16 imgs no alt. Last post Sep 2025.

Also audited but not shown: ZenFlow5 Framework, Workday Staffing, Intelligent Workforce, Login, Thank You pages, legal/policy pages (Privacy, Terms, Cookie, Disclaimer, Refund). These are functional with minor SEO issues (alt text, H1).

3. Content Audit

Blog Library: 168 Posts

Quantity isn't the problem — utilization is. Zeneesha has invested significantly in content (168 published posts from Apr 2023 to Sep 2025). The topics are on-point: Workday implementation, HCM best practices, AMS value, data migration. But almost none of it is driving traffic.

- **Traffic:** GA shows most posts at 1–2 views/month. The entire blog collectively brings in negligible organic search traffic.
- **Freshness:** Last post published September 30, 2025 (6 months ago). Google deprioritizes stale sites.
- **Publication pattern:** Heavy burst in 2023 (weekly), slowed in 2024 (bi-weekly), stopped in late 2025. Consistency signals authority to search engines.
- **SEO optimization:** Posts have titles but most lack compelling meta descriptions, strategic keyword targeting, or internal links to service pages.
- **Content overlap:** Multiple posts cover the same topics (e.g., 4+ posts on HCM consulting benefits, 3+ on legacy systems). This causes keyword cannibalization.

Landing Pages & Conversion Content

- **No dedicated landing pages** for campaigns. Service pages serve as default landing pages but aren't optimized for conversion (no testimonials inline, no CTAs beyond generic contact).
- **No gated content:** 168 posts, zero lead magnets. No downloadable guides, assessments, or whitepapers. Every visitor who isn't ready to call is lost.
- **No case studies:** Testimonials exist (from AQA) but there are no structured case studies with problem → approach → measurable outcome.
- **Duplicate "thank you" pages:** Both /contact-us/thank-you/ and /thank-you/ exist. Suggests inconsistent form handling.

4. Action Plan: Fix → Automate → Redesign

Not everything needs a redesign. Here's what can be fixed now, what requires a rebuild, and why.

Action	Why It Matters	Approach
Fix broken pages (ZAS, ZCS)	2 service pages in main nav return server errors. Active revenue leak.	Automate
Fix meta description typo	"Zenesha" in Google results. Brand credibility hit on every impression.	Automate
Add missing meta descriptions	3+ key pages have none. Google generates poor snippets.	Automate
Fix duplicate H1 tags site-wide	Footer "Workday®" H1 on every page. Confuses topic signals.	Automate
Add alt text to 60+ images	Accessibility and image search visibility. Systematic fix.	Automate
Fix Cyber Security page title	Shows Elevate's title. Wrong keywords, wrong ranking.	Automate
Redirect 404 errors	5+ users/month hitting dead pages. 301 redirects needed.	Automate
SEO-optimize top 20 blog posts	168 posts, most invisible. Rewrite metas, add internal links.	Automate
Consolidate overlapping content	4+ posts on same topics = keyword cannibalization. Merge or redirect.	Automate
Reduce script/stylesheets bloat	22 scripts + 36 stylesheets. Requires theme/plugin audit.	Redesign
Rebuild hero & CTA structure	Half-empty hero, duplicate CTAs, no social proof above fold.	Redesign
Create conversion-focused service pages	Replace jargon (ZAS/ZCS) with client language. Add inline proof.	Redesign
Build lead capture funnel	No lead magnets, no Calendly, no qualification. Visitors drop off.	Redesign
Mobile-first rebuild	Nav doesn't collapse properly. Mobile B2B research growing.	Redesign
Create 2–3 campaign landing pages	Currently no dedicated landing pages for paid/outbound campaigns.	Redesign
Restart content calendar	6 months stale. 2–4 keyword-targeted posts/month + LinkedIn.	Manual
Build 2–3 structured case studies	Only AQA testimonials. Need problem → approach → outcome format.	Manual

Bottom Line

9 of 18 actions can be automated without touching the design. This includes fixing 2 broken service pages, patching SEO gaps across all 28 pages, and starting to unlock the 168-post content library.

The redesign is still necessary — performance bloat (22 scripts/36 stylesheets), the conversion architecture, and mobile experience can't be patched. But by automating fixes first, the site starts performing better immediately while we scope the rebuild properly.

Recommended next step: Start automated fixes this week (low-risk, high-impact). Scope redesign in parallel. **We need codebase access and Google Search Console to execute.**
